The Code of Conduct, Compliance Audit

EMPLOYEE'S USE OF SOCIAL MEDIA (CDPD FINANCIALS)

The Parties & The Audit Scope:

- **Auditor:** DISAG (Denton Information Security Auditing Group) is a leading IT auditing firm consisting of a well-experienced team of auditors and compliance professionals who are licensed by ISACA and have been serving for two decades.

- **Auditee:** CDPD Financial- Providing financial and banking services to the Denton community.

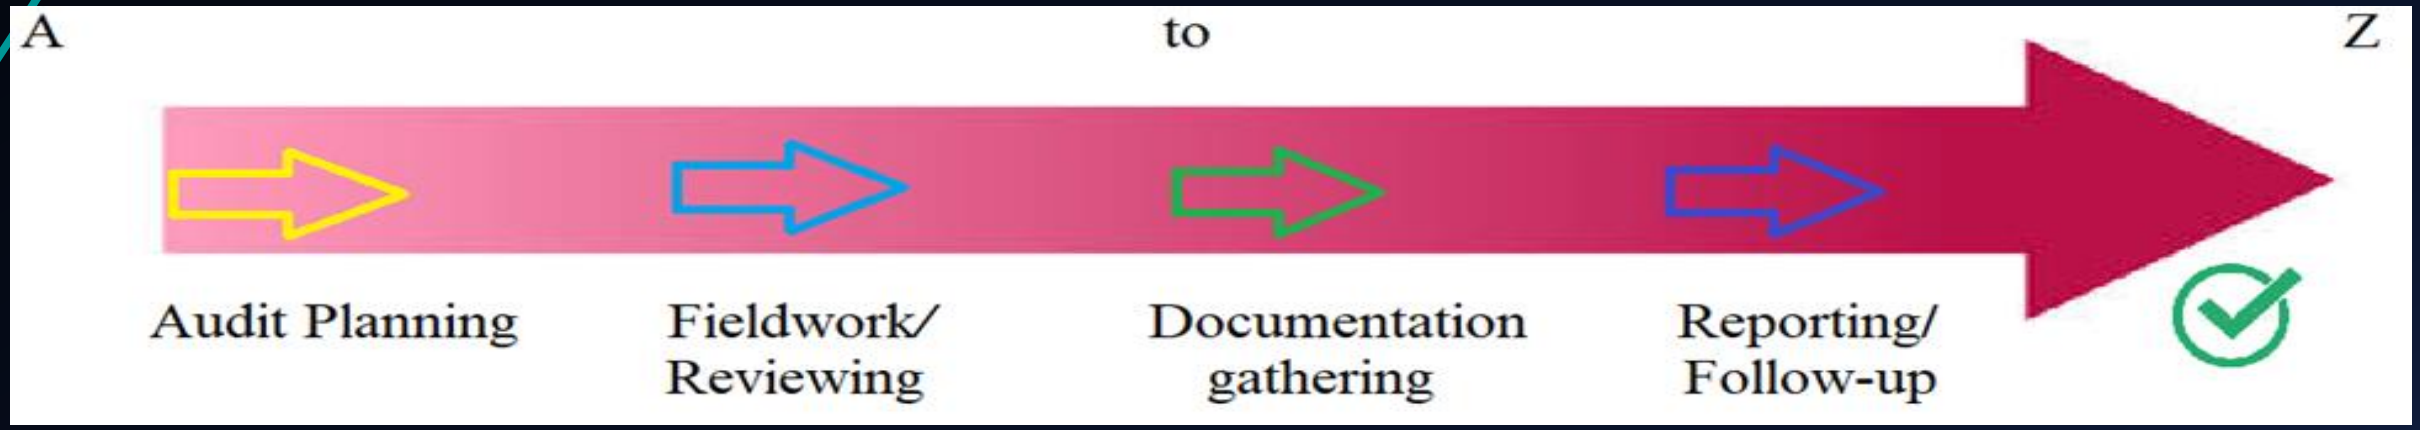

- **Scope:** Auditee has tasked the DISAG to perform an IS audit - compliance audit on their employee's use of social media and assess its compliance with the HR code of conduct.

Purpose & The Process of our Compliance Audit:

A compliance audit is for determining the level of compliance with the policy.

Through :

- Reviewing the overall policy regarding the code of conduct.
- Reviewing the employee's security policy training.
- Interviewing the HR manager for their viewpoints.
- Examining system logs for any related & reported incidents.
- Reporting the findings & providing remedies if needed.

Why our findings are important?

REMEMBER, THE AUDITOR IS ON YOUR SIDE.

- With an unbiased viewpoint, the auditor is here to observe and examine policies, compare them with their routine day-to-day functions, spot the shortcomings & bring those into the spotlight for strategy improvement purposes.
- Our assessment and findings would give the auditee, a clear view of what is broken, where the company is getting hurt the most, and how to fix it.

WE ARE HERE TO HELP!

Findings>Reporting>Recommendation:

- Social media policy had been violated by a few of the personnel.
- After reviewing the policy on the code of conduct, interviewing the HR manager, and visiting logs & incident reports, the auditor has concluded that the auditee has been complying in most parts, but a few employees' comments on social media using company-owned devices had violated the company’s code of conduct policy.
- The Auditee has a comprehensive IS policy implemented. It needs to be reinforced by adding more awareness-based training. The periodical browser log monitoring and testing of the personnel’s knowledge on that aspect are what we recommended.

Conclusion:

After conducting the audit for CDPD Financials, they have been updated on what could be at stake when it comes to their compliance with the Enterprise Information Security Policy (EIPS). The Code of Conduct is important to be there & enforced, but it is not enough to protect the company's reputation from threats. Certain risks can be accepted and accounted for, but the loss of reputation for any successful business can be detrimental.
